NON-RESPONSIVE

Dear **NON-**:

Your well has been sampled and found to contain a trace amount of contamination. At the present the level is low enough to present no health hazard. We are, therefore, not recommending you limit the use of your well. However, the levels of these contaminants can vary over time; therefore, we recommend that the well continue to be monitored or that you find another way to assure yourself additional contaminants will not enter the well in the future.

If you have any questions about this health risk assessment, please contact me at 623-5352. If you have any questions about studies and remedial actions at the waste site or routine monitoring of wells in the area, please contact Shawn Ruotsinoja of the Minnesota Pollution Control Agency at 612/296-7375.

Sincerely,

David G. Gray, Chief  
Section of Health Risk Assessment  
Minnesota Department of Health
